Student Management System

Mohammed a k alhamss B2205.010024

Project Overview

This project is a web-based **Student Management System** built using PHP, MySQL, and HTML. It allows administrators to manage student records through a secure dashboard. Key functionalities include:

- **Database Setup**: Automatic creation of databases and tables.
- **Authentication**: Secure admin login with hashed passwords.
- **CRUD Operations**: Create, Read, Update, and Delete student records.

Email: admin@uni.edu

Password: admin123

Feature	Implementation Description
Banner	A high-resolution university-themed header appearing on every page for professional branding.
Menus	A dynamic sidebar navigation menu providing quick links to Dashboard, Add Student, and View Records.
Slider	A homepage image carousel highlighting campus news and system updates.
Pagination	Efficiently breaks the student list into pages (e.g., 10 per page) to ensure fast loading times as the database grows.
Search	A real-time search bar on the view_students.php page allowing admins to find students by ID or name using SQL LIKE queries.
Breadcrumbs	A secondary navigation trail (e.g., *Admin* > *Student Management* > *Edit Student*) to help users track their location.
